The first decentralized retirement planning solution

Eldorado is a decentralized platform that empowers users to build, grow, and manage personalized retirement savings using blockchain, DeFi, and NFT technology. Through staking, yield opportunities, NFT-based pension plans, and a Learn-to-Earn academy, Eldorado offers a secure, inflation-resistant alternative to traditional pensions.

NFT retirement plans

Eldorado's NFT retirement plans allow users to lock ELDO tokens into smart contracts that mint unique, personalized NFTs representing their retirement savings. These NFTs track contributions, maturity timelines, and potential yield, offering a transparent and portable pension solution. Unlike traditional plans, they are fully on-chain, potentially tradable, and owned entirely by the user without intermediaries.

DeFi yield opportunities

Eldorado integrates decentralized finance (DeFi) protocols to let users earn yield on their ELDO holdings through staking, lending, and liquidity farming. These options provide flexible, non-custodial ways to grow long-term savings with competitive returns. By leveraging the wider DeFi ecosystem, users benefit from both platform-native rewards and additional yield streams.

DAO-based

Eldorado is governed by its community through a DAO, where ELDO token holders propose and vote on key decisions such as platform upgrades, staking rates, or fund allocation. This structure ensures transparency, accountability, and decentralization of power within the ecosystem. As the platform evolves, the DAO will play a central role in shaping its direction and sustainability.

Eldorado Academy

The Eldorado Academy is an integrated learning platform that educates users on blockchain, retirement planning, and personal finance. It features a Learn-to-Earn model, rewarding users with ELDO tokens for completing educational modules and improving their financial literacy. The Academy lowers the barrier to entry, onboarding users into DeFi while promoting responsible, informed long-term saving.
